Abstract (en)
[origin: WO2013121044A1] The invention relates to a method for producing a heat-reflecting envelope construction (1) for a building. The aim of the invention is to avoid heat energy losses in an economical, simple and effective manner which is achieved by providing a support layer (2) comprising a layer (3) with heat-reflecting material and by securing said support layer to sides and parallel to the exterior of the building (4), in such a way that an inner side (5) of the support layer (2), comprising the layer with the heat-reflecting material, faces the exterior of the building (4) and that between the carrier layer (2) and the exterior of the building (4), an air barrier (6) is formed.
