Abstract (en)

[origin: WO2013120623A2] The invention relates to a diffuser having a wall (8) that encloses an inlet having a round cross-section that transitions into an angular cross-section on the outlet of the diffuser over the height of the wall (8) of the diffuser. The transitions (15) between the sides (34 to 37) of the wall (8) have a twist in the height direction that follows the swirl of the flow of air through the diffuser. The ventilator has such a diffuser. The device has a housing on which at least two ventilators, each having one diffuser, are arranged.
