Abstract (en)
[origin: WO2013122951A1] A crossbow is provided which has a frame and first and second limbs secured to the frame. A bowstring extends between the first and second limbs and is configured to move between a forward rest position and a rearward cocked position. A beam is secured to the frame forward of the forward rest position of the bowstring and is configured to extend over the forward rest position of the bowstring. The beam is configured to allow one or more accessories to be mounted thereon. The crossbow is also provided to have, in a first preferred embodiment, a frame having a rear end, and a firing assembly and a butt member, each of which are associated with the frame.
