Abstract (en)

[origin: WO2013120768A1] The present invention discloses a load driver and a method for reducing an output ripple current of a load driver. The load driver includes: a DC-DC converter, which has a first output and a second output; an opposite phase ripple current generating circuit, which is connected to the second output and configured to generate a second current, with a phase of a ripple current being opposite to a phase of a ripple current of a first current from the first output, wherein, the first current and the second current are combined into an output current to drive the load.
