Abstract (en)

[origin: WO2013178452A1] The invention relates to a valve machining device (1) having a base plate (3), an articulated arm robot (5) disposed on the base plate (3), on the free end of which robot a tool receiver (12) is provided, and having at least one cutting tool (13-18) which can be received by the tool receiver (12), wherein the valve machining device (1) has a connecting device (19) which is arranged to attach the base plate (3) to a valve flange (25) of a valve (2) to be machined. The invention also relates to a method for cutting-machining of a valve using such a valve machining device (1).
