Abstract (en)
[origin: WO2013156298A2] The invention relates to a control system for controlling a rail vehicle, comprising a first control level for controlling first functions of the rail vehicle and a second control level for controlling second functions of the rail vehicle selected from the first functions, wherein the first control level comprises a first operating unit (1) and a first controller (3), which first controller (3) is connected to contactors (12) to be controlled, wherein the first operating unit (1) and the first controller (3) are connected to each other by means of a first bus system (9) for data transfer, wherein the second control level comprises a second operating unit (2) and a second controller (4), which is connected to the contactors (12) to be controlled.
