Abstract (en)

[origin: WO2013123936A1] The invention relates to a coupling element for a crane or to a lowering device, in particular a davit, for producing a detachable force-locked connection between a load to be carried, in particular a boat, and a cable-like supporting element, in particular a supporting cable, by means of a cable connection between the cable-like supporting element and the coupling element, a load connection between the load and the coupling element, a locking and unlocking mechanism for changing between an open position, in which the load is released from the cable-like supporting element, and a closed position, in which the load is force locked to the cable-like supporting element. The invention further relates to a lowering device for lowering a buoyant object, in particular a boat, from a deck, in particular from a ship or an off-shore facility, and to a boat having a mounting for a lowering device.
