Abstract (en)

[origin: WO2013126055A1] A package assembly (10) for a drug reconstitution assembly (100) includes a body (14), a drug reconstitution assembly (100) and a removable lid (12). The body includes a plurality of protrusions (16, 18) configured to mate with a plurality of corresponding features of the drug reconstitution assembly to inhibit axial and rotational translation of the drug reconstitution assembly and its constituent parts during shipping and handling. By preventing axial and rotational shifting during shipment, premature and accidental puncture or contamination of the medication or the spikes within the drug reconstitution assembly is minimized.
