Abstract (en)
[origin: WO2013123923A1] The present invention relates to a power plant for generating electrical energy, comprising at least one accumulation device (1, 10, 20) for accumulating or storing water from a natural or artificial body of water or river, wherein the accumulation device has at least one passage (4), in which the flow velocity of the water is increased, and a power generator or a rotational device (5) or a turbine, having a coupled electrical generator for generating electric current, arranged in or on the passage (4) of the accumulation device and driven by the water flowing through the passage (4).
