Abstract (en)

[origin: CN104229285A] The invention discloses a beverage container with a drinking vessel, a drink cover and a thread ring, wherein the beverage container comprises an internal space, an annular vessel opening, an opening edge for enclosing the opening and an external thread. The drink cover comprises a bottom wall; an annular flange used for enclosing the bottom wall and leaning against an opening edge of the drinking vessel; a drink element, projecting from base wall outwards; and a sealing apparatus, used for sealing and opening a channel from an internal space to the outside of a mouth part, wherein the mouth part can be opened for drinking, or else can be closed. A ventilating channel is arranged on a base side of the annular flange or a top side of the opening edge, wherein the ventilating channel extends from an opening of an internal channel to an opening of an external channel. The opening of an internal channel is arranged in an internal space radially inwards and led to an internal sapce of the drink vessel. An opening of an external channel is arranged radially and led to external environment, so that the annular flange is fixedly arranged on the opening edge through the thread ring resisted in a close way.
