Abstract (en)
[origin: EP2818400A1] The invention relates to a marine fender (1) which is designed to be removably suspended from a marine structure or a vessel by means of one or more lines and/or ropes, in which the fender (1) is provided with an inner and an outer continuous wall (2, 3) and one or more cavities (5a - 5g), in which the fender (1) comprises two closed outer side walls (4) which are arranged at an angle to the longitudinal direction of the fender (1) and which each connect the inner wall (2) to the outer wall (3) and each delimit at least one closed cavity, and the inner wall (2) comprises an indentation which is configured in such a way that the outer side walls (4) and/or the intermediate side walls (6) which are arranged at an angle to the inner and outer wall (2) are prevented from bending and/or the fender is prevented from tearing if it is being compressed.
