Abstract (en)

[origin: EP2818610A1] Closing part, typically a closing part for a fence or a gate, comprising a first beam, a second beam and a plurality of bars with first ends and second ends extending between the first beam and the second beam, wherein the first beam and the first ends of the plurality of bars are configured to secure the first ends mechanically in the first beam by a translating and rotating movement; and the second beam is provided with a number of through-openings through which the second ends of the plurality of bars protrude, wherein parts of the second ends have protrusions which are arranged by arranging an expanding tool in the second ends of the bars and which are such that the second ends are secured in the second beam.
