Abstract (en)
The invention is to provide a refrigerator in which dew condensation water can be prevented from dripping down a floor as water droplets even when sealing property for covering a clearance gap between vacuum heat insulating members is incomplete and thus the dew condensation water occurs. The refrigerator is provided with a joining portion formed by joining a plurality of plate members and is provided with a dew receiving portion below the location, in which the vacuum heat insulating member inside a main body is not arranged, as an accumulating portion for accumulating the dew condensation water occurring in the joining portion of the plate member.
