Abstract (en)

[origin: WO2013128126A1] A water-based nail varnish composition containing a film-forming polymer in an aqueous emulsion or in an aqueous suspension, of acrylic polymer type, which has a Tg greater than or equal to 10°C, in combination with a coalescent for said polymer, water, and optionally a dye and/or a pigment, characterized in that it comprises at least one silicone-based compound in a concentration between 0.1% and 15% by weight, relative to the total weight of said composition, said composition being capable of forming, after application to a coat of a first organic solvent-based varnish, a varnish (known as patterned varnish) which has irregular patterns in the form of flowers (3) and cracks (2) when it dries, revealing, through these patterns, the first varnish applied to the nail (1).
