Abstract (en)

[origin: WO2013127947A1] The present invention relates to a production method for fiber composite materials such as fiber insulation materials or fiber plates, chipboards, and oriented or unoriented structural boards and insulation materials and insulation plates made therefrom, wherein heating is performed first by means of hot air and then by means of hot steam. Said procedure leads to an unexpected heating of the fiber non-woven fabric or the chip mat and thus to a significantly improved method.
