Abstract (en)
[origin: WO2013127650A1] The invention relates to a forgery-proof carrier (1) having at least one metallized layer (2), into which at least one optically variable element (6) is introduced, the at least one optically variable element (6) having a non-individual embossed structure (A), wherein the at least one optically variable element (6) has an individual laser-lithographic structure (B) with a resolution of less than 20 µm.
