Abstract (en)

[origin: WO2013156299A2] The invention relates to a method for the auxiliary operation of a track element (100, 110), said method having especially high operational safety. For this purpose, the method proceeds according to the invention in such a way that driving data related to at least one track-bound vehicle (10) from a control device (60) of a train control system are received by an operation control system (130) and the received driving data are taken into account by the operation control system (130) in an auxiliary operation of the track element (100, 110). The invention further relates to an operation control system (130).
