Abstract (en)
[origin: WO2013127632A1] The invention relates to a lighting device with a semiconductor light source module (1), an optical unit (2), and a common support (3) for the semiconductor light source module (1) and the optical unit (2). The optical unit (2) is mounted on a front face (31) of the support (3) and has at least one dowel (23) which extends into a fitting bore (121) in the semiconductor light source module (1), wherein - the semiconductor light source module (1) rests on a support (3) rear face (32) opposite the front face (31), - the at least one dowel (23) protrudes through an opening (34) in the support (3) and extends into the fitting bore (121) of the semiconductor light source module (1), and - the at least one dowel (23) forms a shoulder (230) which rests on a semiconductor light source module (1) support surface (120) resting on the rear face (32) of the support (3).
