Abstract (en)
[origin: WO2013167309A2] The invention relates to a selection unit (60, 280) for selecting the configuration (K1 to K3) of an electric motor (10, 54, 250), comprising: an input unit (EE), which can receive at least one signal (295) or data, which indicates a driving state (B1 to B4) of a transport machine (240) or a rotational speed (n) of an electric motor (10, 54, 250); a determination unit, which determines a configuration of the electric motor (10, 54, 250) depending on the signal (295) or data received by means of the input unit (MP); an output unit (AE2), which outputs at least one signal (298) or data, which designates or specifies the selected configuration (K1 to K3).
