Abstract (en)

[origin: EP2821047A1] The present invention relates to a suction opening and a cup for cupping for a vacuum absorption type massage machine, and more specifically, to a suction opening and a cup for cupping for a vacuum absorption type massage machine capable of simultaneously reducing pain due to the expansion of skin and rapidly removing a dark-red mark on the skin after massaging by forming partitions at the suction opening and the cup for cupping, respectively, to remove the concentration of stress generated at the front edge of a suction opening for coming in contact with the skin and the lower edge of a cup for cupping.
