Abstract (en)

[origin: EP2821717A1] Disclosed is a wind direction controller mounted to a body having an air inlet and an air outlet, including a wind direction control member for guiding air being discharged through the air outlet, and a driving mechanism for driving the wind direction control member in a first wind direction mode in which one end of the wind direction control member faces an inside of the body, and the other end of the wind direction control member faces an inside of a room, or in a second wind direction mode in which the one end having faced the inside of the body in the first wind direction mode faces the inside of the room, and the other end having faced the inside of the room in the first wind direction mode faces the inside of the body, thereby permitting to form a variety of air flows with a simple structure and simple control, selectively.
