Abstract (en)
[origin: WO2013131753A1] The invention relates to a reclining device (1) for the support of a lying person, having a foot (2) and (i) a first movably mounted thigh support (3) arranged thereon for supporting the first thigh of a person, (ii) a movably mounted second thigh support (4), independent of the first thigh support (i), for supporting the second thigh of a person, the second thigh support being combinable with the first to form a complete support, and (iii) a movably mounted back and head support (5, 6) that is independent of the first and second thigh supports.
