Abstract (en)
[origin: WO2013132411A1] A packet for tobacco products comprises an outer package (3) which forms two larger lateral walls (4), two smaller lateral walls (5), a top (6) and a bottom (7), the latter comprising a first base portion (8) and a second base portion (9) which are connected to each other by a line of weakness perpendicular to the larger lateral walls (4) and forming a hinge line (10); the outer package (3) contains a first inner package (11) and a second inner package (12) each for containing a respective group (13) of tobacco products (2). Each of the two inner packages has two larger lateral walls (18), two smaller lateral walls (19), a top (20) with an opening (21) for taking out at least one tobacco product (2) and a bottom (22). Each bottom (22) of both of the inner packages is connected to the first portion (8) and respectively to the second portion (9) of the bottom (7) of the outer package (3). Lastly, the first inner package (11) and the second inner package (12) are able to move about the hinge line (10) between a position in which the packet (1) is closed, in which the first and second inner packages are superposed and substantially aligned, and a position in which the packet (1) is opened fan-style, in which the first and second inner packages are offset from each other by a predetermined opening angle (a).
