Abstract (en)
[origin: WO2013131530A1] The invention relates to a turnbuckle (1) for connecting structural elements, particularly precast concrete parts (10), which is formed substantially in a shell shape, and a receiving chamber (2) accessible at least from the outside by means of an access opening (9) and also has passage sections (3, 4), preferably facing each other, opening into the receiving chamber, said passage sections being preferably designed as passage openings for the insertion of fastening means (13). The present invention also relates to a construction kit for connecting structural elements, a method for connecting structural elements, an arrangement for connecting structural elements and a method for preparing structural elements.
