Abstract (en)

[origin: WO2013131817A1] A window (1), door or the like, having a blind frame (2), a leaf frame (3) that is displaceable, particularly rotatable and/or tiltable in relation to the blind frame (2), and having at least one locking element (4) mounted in a guide receptacle (5) of the blind frame (2) or leaf frame (3), said locking element being displaceable between a release position permitting a displacement of the leaf frame (3) and at least one locking position counteracting the displacement of the leaf frame (3), wherein the locking element (4) in the locking position engages with a locking receptacle (8) on the leaf frame (3) or the blind frame (2). In the process, it is proposed that side of the guide receptacle (5) facing the locking receptacle (8) in a closed position of the leaf frame (3) and/or the side of the locking receptacle (8) facing the guide receptacle (5) in the closed position of the leaf frame (3) is closed at least in regions with an elastically expandable diaphragm (9, 20).
