Abstract (en)  
[origin: WO2013132104A1] A friction brake pad (1) having a corrosion prevention element (3) composed of a baser metal than cast iron, in particular of zinc, said corrosion prevention element being flush with a friction surface (4) of the friction brake pad and terminating with the friction brake pad (1). Particles, contained in the brake dust, of the metal of the corrosion prevention element (3) act in the manner of a sacrificial anode and protect the brake disc against corrosion. Furthermore, the material of the corrosion prevention element (3) is mechanically applied as a corrosion prevention layer to the brake disc during braking.
