Abstract (en)

[origin: WO2013131809A1] The invention relates to a handle fixture (10) that is provided for a domestic appliance door (1) and comprises a first bearing part (16) on which a handle element (12) is provided, and a second bearing part (16) that can be pivoted relative to the first bearing part (17, 23), said first bearing part having at least one air inlet opening (21) and at least one air outlet opening (25, 26) which are pneumatically interconnected, the second bearing part having at least one air passage opening (22), and the first bearing part and the second bearing part (16) being able to be pivoted relative to one another into at least one air passage rotational position in which a pneumatic connection is produced between the at least one air passage opening (22) of the second bearing part (16) and the at least one air outlet opening (25, 26) of the first bearing part (17, 23). A domestic appliance door (1), particularly an oven door, comprises a pivoting handle (10-12) that is mounted on an edge side and has a handle fixture (10) and a handle element (12) provided on said handle fixture (10), the handle fixture (10) covering at least one open side of at least one chamber (32, 33) of the domestic appliance door (1), and the handle fixture (10) being a handle fixture (10) according to one of the preceding claims. The second bearing part, as a lower bearing part (16), covers an open side, particularly an upper side, of at least one chamber (32, 33) of the domestic appliance door, and at least one chamber is an aeratable chamber (32).
