Abstract (en)
[origin: WO2014056580A1] The invention relates to a magazine release/holding device (1), which can be operated from both sides, of a firearm, comprising a magazine holding arm (23) and handles (11, 13) which protrude from both sides of the firearm for transferring the magazine holding arm (23) from its magazine holding position into its magazine release position and vice versa, one of the handles (13) being designed in the manner of a rocker arm, the tilting axis of which rests on the weapon housing (3). The magazine release/holding device (1) is characterised in that the magazine holding arm (23) has a longitudinal slot (35) which travels through the magazine holding arm, the handle (13) is supported in the longitudinal slot (35) in its magazine holding position and comprises a bulge (41) which penetrates the longitudinal slot in the direction of the weapon housing (3) and which serves as a tilting axis. The invention further relates to a gripping piece and a weapon housing (3) of a firearm, which are both equipped with such a magazine release/holding device (1).
