Abstract (en)
[origin: WO2013134549A2] Media content is provided using thumbnail-based images and respective archives linked thereto. In accordance with one or more embodiments, access is provided to interactive single-page and multi-page thumbnail images, with each thumbnail image being linked to at least one of a plurality of media-content units in respective sets of the media- content units (e.g., to pages within respective articles each having one or more pages, with each page having predefined text and image data in a set layout). Archive data is identified and communicated for each media content unit, responsive to user input data indicating a selection of one of the thumbnail images, and based on availability of the archive data locally at a user device.
