Abstract (en)

[origin: CA2870420A1] The invention relates to a busbar system for the transport of electrical energy, wherein the busbar system is in a vertical setup position, the busbar system comprising at least one busbar and a cover surrounding the at least one busbar, the busbar system being divided into elements, each element having an inlet opening in a lower region of the housing and an outlet opening in an upper region of the housing, and wherein the housing is substantially closed between the inlet opening and the outlet opening of each element.
