Abstract (en)  
[origin: WO2013131515A2] The invention relates to an arrangement of an actuator (1) and an actuator holder (9). The actuator (1) is movably connected to the actuator holder (9), and devices are provided for supplying the actuator (1) with operating energy. According to the invention, the devices for supplying the actuator (1) with operating energy comprise an energy store (4) integrated into the actuator (1). The actuator (1) is preferably movable relative to the actuator holder (9) in at least one dimension in an unrestricted manner.
