Abstract (en)
The present invention provides a vertically opening/closing screen door, comprising: a pair of main bodies which are disposed upright to be spaced from other on a platform; at least two blocks which are movably provided on respective main bodies, and which overlap each other while moving upward; a wire rope for connecting the block provided on one main body with the block provided on the other main body; and a rope supporting part which is provided in each block and rotationally supports the wire rope so as to connect the wire rope disposed in a plurality of rows with the blocks.
