Abstract (en)

[origin: US2015027959A1] A method, for cleaning a pool with N vertical walls using a robot, comprising adjusting the robot against the vertical wall of rank  $n=1$ . The robot advances along the vertical wall of rank  $n$  until the vertical wall of rank  $n+1$  is detected. The robot retracts over a release distance in order to be released from the vertical wall of rank  $n+1$ . The robot makes a rotation on itself in order to be adjusted against the vertical wall of rank  $n+1$ . Checking whether  $n$  is equal to  $N$ , in the negative case, the cleaning method continues with an incrementation step where " $n$ " is incremented by "1", and then looping onto the advancement step. In the positive case, the cleaning method continues with a finishing step where the robot advances along the vertical wall of rank "1" until the vertical wall of rank "2" is detected.
