Abstract (en)
An automotive lamp (10) includes light sources (16), an inner lens (18), a transparent cover (12), and a light shielding structure that reduces an amount of irradiated light, which reaches the light sources (16), in the light entering the automotive lamp (16) through the transparent cover (12) from above at a predetermined angle relative to the horizontal line. The light shielding structure is extensions (2, 4, 6) placed between the inner lens (18) and the transparent cover (12). The extensions (2, 4, 6) have extending sections (2a, 4a, 6a), respectively, which extend up to the positions where the extensions (2, 4, 6) intersect respectively with the lines extending upward from the light sources (16) by the predetermined angle.
