Abstract (en)

[origin: AU2014203268A1] Abstract The invention relates to an active decoy body with an active pyrotechnic composition and with a structure surrounding the active composition, where the structure surrounds the active composition in such a way that gas produced on burn-up of the active composition is hindered by the structure from flowing off from the active composition to an extent such that the gas pressure on at least 65% of the overall surface area of the active composition is higher than outside the structure.
