Abstract (en)

Methods and apparatus for a computerized system are disclosed. A data processing device receives information from at least one source of log information in the computerized system (1100) and detects, based at least in part on said received log information, at least one security protocol related event at a first host device, the at least one security protocol related event being initiated by a second host device (1102). Information is then stored for determination of a trust relationship record based on the detected at least one security protocol related event and information of the second host device (1104).
