Abstract (en)

[origin: WO2013135995A1] The invention relates to a device (1) for turning over, in particular, a part (100), characterized in that it includes two towers (3) opposite one another, each tower including: a stationary portion (4) and a portion (5) that is vertically movable relative to the stationary portion; an actuator means (16) for moving said movable portion relative to said stationary portion; a beam (6) movable about a stationary axis (X6) relative to the movable portion, the beam including at least one arm; and a ball (8) for retaining the arm at the stationary portion, wherein the part (100) is attached to the beams (6).
