Abstract (en)  
[origin: WO2013135688A1] The invention relates to an apparatus for straightening metal strips, comprising a first, upper group (1) and a second, lower group (1') of straightening rollers arranged in each case immediately in succession in a strip running direction, and a group of individually controllable actuators (2) arranged alongside one another in a transverse direction, wherein an axial bending profile of at least a first of the straightening rollers (1) is settable by the group of actuators (2), wherein at least one second group of individually controllable actuators (2) arranged alongside one another in the transverse direction is provided, wherein an axial bending profile of the least a second of the straightening rollers (1), which is in particular different from the bending profile of the first bending roller (1), is settable by the second group of actuators.
