Abstract (en)  
[origin: WO2013159796A1] The invention relates to a transport pallet (1) of plastics material having a top deck (2), wherein the top deck has an upper face (3) comprising a loading surface (5) for goods and freight and a lower face (4), wherein engagement openings (6) for lifting devices, such as the prongs of forklift trucks, are provided below the top deck. The engagement openings are bounded by supporting feet (7) and/or by a pallet lower part (8) and recesses (9) are formed in the top deck (2) in which stoppers (20) of a material having a higher coefficient of friction than the pallet material are provided, wherein the stoppers (20) extend from the upper face (3) to the lower face (4) of the top deck (2) and with the end faces thereof protrude outwards from the top deck at the upper face and lower face thereof.
