Abstract (en)
[origin: WO2013136253A1] The invention relates to a container (1) which includes a body (2) forming an opening, a mobile ring (4) capable of pivoting relative to said body (2), and a seal (3) made of a flexible, resilient material, connected to said body (2) as well as to said ring (4), capable of being twisted by pivoting the ring (4). According to the invention, said body (2) includes a circular peripheral wall (10) ending in a free edge that defines said opening, and said ring (4) is intended for being positioned around said wall (10); and one of said peripheral wall (10) or said ring (4) includes a series of grooves (11 and 15) and the other one of said ring (4) or said peripheral wall (10) includes a lug, the movement of said lug in said series of grooves enabling guided axial movement of the ring (4) relative to the wall (10) when the seal (3) starts to twist.
