Abstract (en)

[origin: WO2013135742A1] The present invention relates to a device for monitoring and checking manual lubrication for a system having at least one lubrication point (12), said device including: a means (4,11) for identifying said lubrication point (12); a means (8) for measuring the amount of lubricant injected; and a means (9) for determining whether the injected lubricant has in fact been conveyed to the lubrication point (12), said means comprising a pressure sensor and/or an ultrasonic sensor.
