Abstract (en)

[origin: EP2826398A1] This present invention relates to a tubular cosmetic container. The tubular container according to the present invention is characterized in that an upper end of a cap body is formed into a dish-shaped depression in which the depression becomes deeper toward the center, and a valve member is provided at a discharge hole formed at the center of the depression, and thus it is possible to prevent the re-suction of the discharged contents and to simply discharge and use the contents through the depression.
