Abstract (en)

[origin: WO2013139352A1] The present invention relates to a container with a dispensing closure (100) and a dispensing closure for such a container. The container comprises a container neck structure (200) onto which a dispensing closure can be installed. The dispensing closure comprises a base (110) and mounting means on said base for mounting said base to the container. The base comprises an outer side-wall (120). Furthermore, the dispensing closure comprises at least one first projection (122) extending from an inner side of said outer side-wall of said base for engagement with an engagement member (220) of said container neck structure such that a rotational movement of the dispensing closure relative to the container neck structure leads to at least partial breaking of said outer side- wall.
