Abstract (en)

[origin: EP2642183A1] The present invention proposes a post comprising a base, at least one lighting means and a carrier framework with holder slots for receiving said lighting means or solar units. Said post further comprises at least one longitudinal channel accommodating a movable block (15) displaceable in said longitudinal channel by means of a pulley (18) mechanism which can be driven by an electrical motor (17). Said movable block (15) is fixedly joined to said carrier framework. The lifting mechanism according to the present invention allows easier and faster maintenance of post solar units.
