Abstract (en)

[origin: WO2013139638A1] The door (11) is intended for a domestic thermal treatment device (12), in particular a cooking chamber door, and has at least one laterally peripheral frame (13), which is covered on the front side by means of a front cover (15) through which one can see at least in some areas and is covered on the inside by means of an inner cover (16) through which one can see at least in some areas, wherein the frame (13), the front cover (15), and the inner cover (16) enclose an unventilated cavity (17). The cavity (17) is filled at least partially with transparent aerogel, and the door (11) has at least one semipermeable pressure-equalization element (20) for equalizing pressure between the cavity (17) and an environment (U). A domestic thermal treatment device (12), in particular a cooking device, is equipped with at least one thermal treatment chamber (O), which can be closed by means of a door (11).
