Abstract (en)

[origin: WO2013139622A1] The present disclosure relates to a fiber optic telecommunications device. The device includes a support frame (100/200/300/400/500) configured to be pivotally coupled to a fixture (10), the support frame (100/200/300/400/500) pivotable about a pivot axis (30). An adapter mount (112/212/312) is integrally mounted to the support frame (100/200/300/400/500) by at least one reinforcement wall (118/120/218/220/418/520), the reinforcement wall (118/120/218/220/418/520) defining a first side edge (122) and a second side edge (124). A fiber optic adapter (32) mounted to the adapter mount (112/212/312) defines a first connector receiving end (34) and a second connector receiving end (36). When the adapter (32) is mounted to the adapter mount (112/212/312), the first and second connector receiving ends (34, 36) of the adapter (32) extend beyond the first and second side edges (122, 24) of the reinforcement wall (118/120/218/220/418/520).
