Abstract (en)

[origin: WO2013139569A1] Method for parameterizing a field device (F1, F1'), wherein a field device (F1) has parameterization corresponding to a first device model and a first parameter set (P1), wherein if the field device (F1) is replaced by a substitute field device (F1'), a second parameter set (P2) corresponding to a second device model is transmitted to the substitute field device (F1') in order to parameterize the substitute field device (F1'), the second device model being derived from the first device model, and the second device model and the second parameter set (P2) differing from the first device model and the first parameter set (P1).
