Abstract (en)
An adapter for a lock case, having a handle unit (131) to be connected to a door handle and arranged to be rotated about a first axis (A') when the door handle is pushed down or pulled up in order to move a latch bolt in and out from said lock case. The adapter further has a lock unit (132) to be connected to a lock follower extending through said lock case and arranged to rotate about a second axis (B') for moving a lock bolt in and out from said lock case. The handle unit (131) comprises an end portion (137) and the lock unit (132) comprises an end portion (143) which are engaged with each other in such a way that when the handle unit (131) starts to rotate about the first axis (A') the lock unit (132) starts to rotate about the second axis (B').
