Abstract (en)  
[origin: WO2013143616A1] A hard-surface suction implement (10/200) comprises a suction device (12/212) with a suction nozzle (14/214), a separating unit (16/216) and a suction assembly (18/218), and, moreover, comprises a dirty liquid tank (20/220) and a handle (22/222); wherein the separating unit (16/216) has a separating chamber (32/232), in which at least one separating element (36/236) is arranged, and which comprises a suction inlet (34/234), a liquid outlet (52/252) and an air outlet (40/240), wherein the suction inlet (34/234) is flow-connected to the suction nozzle (14/214), the liquid outlet (52/252) is flow-connected to the dirty liquid tank (20/220) and the air outlet (40/240) is flow-connected to the suction assembly (18/218). In order that the hard-surface suction implement (10/200) can be guided along a hard surface by an operator with low expenditure of energy, the handle (22/222) is arranged below the suction device (12/212) in relation to an upright position of the hard-surface suction implement (10/200).
