Abstract (en)  
[origin: CA2868949A1] For the automatic insertion of packages (11) into a large-volume carton (10), two operating devices are used, specifically a packing robot (33) having a carton holder (30) for holding the cartons (10) ready and a packing robot (33) having a head (37) for inserting the individual packages (11) one after the other into the carton (10) in the area of a packing station (33). By means of a relative movement of carton (10) and pack (11), different packing formations within the carton (12) are created.
